

Secure the Browser

Protecting people where work
happens — inside the browser

Making the case

The browser has become the modern workspace. It's where employees collaborate, share files, and explore AI tools, but it's also where security gaps are growing. Traditional defenses don't extend far enough to protect browser activity, leaving data, credentials, and compliance exposed.

Malicious extensions, phishing pages, and Shadow AI tools are slipping through the cracks. Sensitive data can be copied, uploaded, or generated outside company control in seconds. To close these gaps, organizations need to move protection closer to where users actually work.

Our approach

Teneo helps organizations secure the browser environment by integrating next-generation browser protection capabilities into their overall security strategy. Our approach ensures users can work safely and efficiently, without adding friction or complexity.

Access Control

Real-time policies validate who can access which apps and data, blocking risky or unauthorized destinations.

Data Loss Prevention

Embedded safeguards monitor uploads, downloads, and form fills to prevent sensitive data from leaving the organization. Watermarking adds another layer of defense, discouraging unauthorized sharing or capturing of on-screen information, even when someone takes a photo with a mobile device

Policy Enforcement

Security policies follow the user, ensuring consistent protection across managed and unmanaged devices.

AI & Shadow AI Control

Govern how employees use GenAI tools and keep data secure, ensuring inputs and outputs meet company standards.

Visibility

Gain actionable insights into web usage, risky behavior, and data flows—all from a single dashboard.

Key Benefits

- Close browser security gaps
- Protect company data everywhere
- Control Shadow AI usage
- Improve visibility and compliance
- Maintain a friction-free user experience

StreamlineX

Secure the Browser is part of **StreamlineX**, Teneo's framework for creating IT environments that are secure, optimized, observable, and AI-ready.

Together with our **AI-based Email Security** solution, it forms the **Secure the User** pillar – defending users at the two most targeted entry points: email and browser. This unified approach simplifies security operations, strengthens compliance, and ensures protection follows the user wherever they work.

StreamlineX gives organizations the confidence to innovate safely, secure effectively, and see clearly in a fast-changing digital world.
