

Secure the User

Protecting people where they work
most – email and browser.

TENEO
OPENING MINDS

Making the case

Cyber attackers have changed their playbook. They no longer waste time hammering at your perimeter; instead, they go straight for your people.

Over 90% of threats still originate in email. What used to be clumsy phishing attempts are now sophisticated, AI-powered campaigns designed to mimic trusted senders, suppliers, and even colleagues. These attacks slip through legacy filters unnoticed, putting both individuals and the business at risk of fraud, compromise, or reputational damage.

At the same time, nearly 80% of daily work now happens in the browser. It's where your employees collaborate, share files, and increasingly experiment with generative AI. Yet browser activity often falls outside the scope of traditional security, leaving a blind spot for data loss, shadow AI use, and policy evasion.

The uncomfortable truth: most organizations are still defending yesterday's frontlines, leaving today's real attack vectors, email and browser, under-protected.

Our approach

Teneo's Secure the User solution was designed to shift the focus of security to where people actually work. Instead of treating employees as the weak link, we make them the strongest defense.

Smarter Email Defense

Using advanced behavioral analytics and AI-driven detection, we identify and stop the subtle, context-driven attacks that traditional tools miss. From phishing to account takeovers to vendor impersonation, threats are blocked in real time before they reach the inbox.

Browser-Centric Security

Security is built directly into the browser environment. Access checks, data loss prevention, and policy enforcement happen natively, without slowing down productivity. This extends protection to SaaS apps, cloud services, and AI tools that employees rely on every day.

Shadow AI Control

As employees adopt generative AI, Secure the User ensures usage stays aligned with company standards. Sensitive data is prevented from leaking, and AI outputs are governed to meet compliance and ethical requirements.

Unified by StreamlineX

Underpinning it all is our StreamlineX framework, ensuring new capabilities are deployed rapidly, optimized for performance, and continuously aligned with your transformation goals.

With Secure the User, protection is invisible, adaptive, and user-friendly. It's a holistic approach that closes today's biggest security gaps while giving your people the freedom to innovate safely.

Key Benefits

- Close security gaps
- Stay ahead of AI threats
- Control Shadow AI
- Reduce noise and alerts
- Boost productivity
- Simplify adoption

Why Teneo's Secure the User

Attackers are targeting the human layer and traditional defenses haven't kept up. That's why Teneo built Secure the User, a modern solution that unites smarter email protection, browser-native security, and governance for AI use.

The outcome is simple: stronger protection where your people actually work, less risk for your organization, and more freedom for your teams to innovate with confidence.

StreamlineX

Secure the User is a cornerstone of StreamlineX, our framework for making IT more secure, optimized, observable, and AI-ready. By uniting advanced email defense and browser-native protection in a single approach, Secure the User ensures employees, data, and AI-driven workflows all benefit from consistent safeguards and seamless performance.

StreamlineX makes it easier for IT teams to protect people without adding complexity, helping them see clearly, secure confidently, and empower users to work boldly. The result is resilient security that's ready for how people work today and flexible enough for whatever comes next.
